***Claim Objections***

Claims 7-18 are objected to because a variable "x" is defined beneath formulae (3) through (8) but that variable does not appear in any of these formulae. It is expected that "x" denotes the number of SiO<sub>2</sub> units as there is no subscript attached to that structural attribute in formula (8). Correction is required.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 7-18 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Applicant has amended claim 7 at 5 lines from the end to stipulate that the variable "e" is an integer of between 1 and 10 to, ostensibly, overcome the Examiner's prior art rejection because original claims 7 and 8 had been deemed unpatentable where, among other things, "e" = 0. The Examiner reviewed the Specification for evidence that it had provided express support for the new endpoint but found none.

Applicant is reminded of the telephone discussions wherein the Examiner explained that, although this limitation was considered new matter, the added subject matter stipulating that at least one of "g", "h", "L", "m", "n", "t", "u", "v", "x", and "y" is not zero is acceptable.

Art Unit: 1712

Therefore, it is recommended that Applicant simply amend the definition of "e" in the same manner.

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claim 7 is provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 8 of copending Application No. 10/807494. Although the conflicting claims are not identical, they are not patentably distinct from each other. Close inspection shows that there is considerable overlap between the semiconductors of these claims, the main difference being that the present claims outline an alkaline or acidic condition under which hydrolysis/condensation is carried out. Other differences include the different, but largely overlapping, ranges associated with the numbers of structural units of each type in the formulae. These differences are attributed to Applicant's amendments in the present case to re-define "g", "h", "L", "m", "n", "t", "u", "v", "x", and "y".

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

All of the claims are allowable pending Applicant's acceptance of the proposed changes set forth herein and were Applicant to file a terminal disclaimer disclaiming any portion of the patent term of a patent having evolved from the aforementioned co-pending application.
